

# Lighting Revolution Showroom

November 2012

The Lighting Revolution showroom offers a fully interactive explanation of our technologies and lighting systems. All designs can be catered for your projects.

A boardroom table, AV projector system and coffee stations allow you to introduce your customers to our lighting systems. Technical assistance is only an office door away.

## Lighting Revolution

*We give you the green light!*

## OLD vs NEW

The Lighting Revolution showroom is a valuable sales asset to our customers. The display area is designed to discuss the various options available to the customer as well as compare old technologies against the energy efficient solutions that we provide.

The majority of the lighting systems on show are divided into 8 main areas: Tubes, Downlighters, Spotlights, Floodlights, Induction High Bays, Spot Lights, Grill lamps and Decorative lighting.

We also have sections of the office and showroom utilizing our new occupancy and sensor technologies.

## The ultimate salesman

A boardroom table, coffee station and AV system will allow our friendly sales staff to help you with any queries. If you are an intermediary agent selling on then all our facilities are at your disposal for your customer presentations and explanations.

Quick answers are important in today's projects and all queries regarding prices, inbound stock, warehousing and other administrative queries can be quickly dealt with by our competent team at the premises. Specific documentation can be provided to you if advance notice can be given.

The idea is that you feel comfortable when exploring this exciting technological field. Park outside, plug in to our network for all the information you need ranging from wiring to trading terms. We look forward to meeting you!
